

Description

The water filter with a valve is a coarse filter for waterborne heating systems in vehicles. It consists of a ball valve with integrated filter screen all in one housing. Compared to a solution with a separate valve and filter this construction is:

- cheaper
- more compact
- easier to use
- low pressure drop

For further information on how to replace the filter, see service sheet Prd0107.

Attach the valve so that the direction of flow matches the arrow (see diagram)!

Technical Data

Dimensions & weight:

Dimensions	Part number 11992
D	1"
d	28.5
H	71
h	51
I	21.5
L	95
R	75
Weight	1.16

Material:

Valve housing	brass
Filter screen	stainless steel
